

NovoPath™ Implements Anatomic Pathology Software System at Boston Scientific

NovoPath, Inc. (NovoPath) has provided Boston Scientific Corporation with the NovoPath™ Anatomic Pathology Software Platform, which is designed to improve workflow, increase efficiency and reduce costs. The system provides improved specimen tracking, through NovoPath's LEAN Process Improvement Module, which allows managers to pinpoint bottlenecks, provide real-time status on samples to clients, and quickly locate samples.

"The NovoPath implementation was managed professionally and completed on schedule. We have achieved tangible efficiencies post-implementation, including an improved experience from various software and hardware integrations," said Jorge Perera, Vice President, Operations and General Manager for Boston Scientific Corporation.

The NovoPath platform implementation has helped minimize many manual lab processes through equipment connectivity capabilities, driving process efficiencies and quality benefits. The system automatically uploads dictation information, reducing the need for transcription into pathology reports. On-demand slide printing has minimized waste by eliminating manual batch printing and overproduction of slides by printing only what is needed for a specific case at microtomy. All documents associated with a patient's case are stored in one location to improve efficiency while meeting retention requirements. The system also offers an electronic flagging feature to support the gathering of in-process quality data for continuous improvement.

"Use of the full suite of NovoPath™ Anatomic Pathology Software provides lab managers and pathologists with operations improvements driven by technology," said Robert Dowd, Vice President of Strategic Accounts for NovoPath. "We look forward to continuing to work with Boston Scientific in the future."
