

Introducing a breakthrough in efficiency for busy Anatomic Pathology Laboratories: Touch-Screen GYN Cytology Screening with the NovoPath™ CytoTouch™ Module.

NovoPath™, a leader in AP Software Solutions, introduces its CytoTouch™ Module for GYN Cytology screening. CytoTouch™ dramatically reduces the time necessary to report GYN patient results and increases accuracy by providing a customized “electronic screening sheet”.

CytoTouch™ uses a touch-screen monitor and a barcode scanner requiring only basic computer knowledge to quickly and easily result GYN cases.

- Scan a barcode to start resulting. Then by simply touching the large checkboxes for the relevant codes on screen, the Cytotech is able to record the results in seconds. To finish, simply touch “Verify”. Repeat!
- Free up desktop space. CytoTouch™ operates without the need for keyboard or mouse. An onscreen keyboard is built-in in case a keyboard is needed.
- Customize your “electronic screening sheet” to incorporate new processes or to duplicate familiar manual processes with fingertip access to patient history.
- Use 1-D and 2-D barcode scanners to minimize data entry errors.
- CytoTouch™ works seamlessly with existing QA processes and follows the same strict auditing rules in NovoPath’s standard Cytology module.

CytoTouch™ enhances productivity, increases data entry accuracy, reduces PC clutter, and provides easy access to patient information while meeting the security needs of the organization.
