

### Introducing NovoNotifier™, a unique method for automated, immediate, and high quality patient report delivery that saves time and supports EMR adoption

Addressing the high cost of setting up and maintaining remote printers for physician sites, along with the ever-pressing need to provide physicians with fast, reliable access to patient reports, Novovision introduces a unique Report Delivery method – NovoNotifier™.

- At regular intervals, reports are automatically downloaded and printed to the specified folder locations at client sites with no user intervention.
- Offers the lab manager an intuitive user interface to monitor report delivery to clinicians with the ability to track delivery and printing events, providing the assurance that clients have received and accessed their time-sensitive reports.
- Clients whose EMR supports patient file pick-up from a specified folder, can automatically load the patient's pathology report into the patient's chart for immediate access without user intervention.
- Can be integrated with the NovoPath™ Web Portal for a comprehensive user experience.
